DRONE OPERATIONS

Award: Certificate of Completion
Additional Program Information: Upcoming Classes (https://www.brcc.edu/workforce-development/aviation/)

Flying a drone (or unmanned aerial system) for commercial use requires a Federal Aviation Administration (FAA) Part 107 remote pilot certificate. The drone operations course is for all aspiring professional drone pilots. During this course, instructors provide comprehensive classroom training and prepare drone pilots for the exam, which is administered at an FAA-certified testing center.

Course topics include regulations, airspace classifications and restrictions, weather, loading and performance, and operations. The exam ensures that commercial drone pilots have the ability to fly responsibly, interpret aeronautical maps, and abide by all applicable FAA regulations. (Note: This is a test prep program. The examination is not administered as part of the class.)

Review the current schedule (https://www.brcc.edu/workforce-development/aviation/) for class times and fees. This material can be presented to groups of any size via private, onsite delivery. Please contact BRCC Corporate Training to discuss pricing and scheduling options.
